## Pico Lifting Step

11/07/21

\*\*\*\*\*Draft\*\*\*\*\*

```
cd tmp
git clone git@github.com:develone/pico-lifting.git
cd pico-lifting
cp testfiles/2048/* .
./buildpi_lift.sh
rm -f dwt.bin;./pi_jpeg 0 1
```

Next instead of reading the files and writing the results in dwt.bin The goal is use as serial tx & rx to send the data to the program. Then transmit the result over the serial tx.

The folder testfiles/2048/ has the files to perform a 2048 lifting step.  
The folder testfiles/256/ has the files to perform a 256 lifting step.

The following command compiles the code ./buildpi\_lift.sh

There is a define in pi\_jpeg.c that turns off the debug

```
rm -f dwt.bin ; ./pi_jpeg 0 1
0x0 0x22048 0x1022048
ptrs.fwd_inv = 0x2022060
reading r.bin
fwd lifting step only
w = 0x800 ptrs.inp_buf wptr = 0x22048 alt = 0x1022048 ptrs.fwd_inverse = 0x2022060
ptrs.fwd_inverse = 0x1
starting red dwt
finished ted dwt
